

FLEX ICE MAT™ / 0°C ICE MAT

Flex Ice Mats™ can be wrapped around your payload to help stabilize temperature and minimize hot spots.

- **Non-toxic**
- **Reusable**
- **Can be tailored by cutting between the pouches with scissors**

Flex Ice Mats™ are a great choice for shipping large quantities or large masses of temperature sensitive products that need to remain cold for a long period of time. Cryopak Flex Ice Mats™ are used to keep temperature sensitive payloads for the pharmaceuticals, diagnostics, medical device, and food industries cold during long transits. With a freezing/melting point of 0 degrees Celsius, these flexible ice mats stay colder than ice without leaking or spilling.

These patented ice blankets ship with liquid filled cells (i.e. chambers; pouches) available in 3 different sizes (2 x 2, 3 x 2, and 4 x 6). The frozen cells deliver a thermal barrier to keep refrigerated products cold without freezing for superior protection and to ensure product integrity.

The Flex Ice Mat™ offers the ability to easily scale to different sizes. The ice blanket remains flexible, even when frozen, and is easily scalable to the size of the application. Applications range from wrapping a full pallet load to wrapping a small product payload box.

Item Number	Description	Unit Dimension	Unit Weight	Units Per Case
FPP83598	Flex Ice Mat 2 x 2 cells wide	320.7mm x 431.8mm	750g	14/case
FPP83569	Flex Ice Mat 4 x 6 cells wide	558.8mm x 355.6mm	1200g	15/case
FPP83599	Flex Ice Mat 3 x 2 cells wide	295.3mm x 431.8mm	1280g	12/case
